How to measure the size of fan blades Tips

Outer diameter length size: that is, the maximum size of the fan blade as a whole. We use a tape measure to measure vertically (as shown in Figure 1: T).

Do not measure diagonally to offset the center (as shown in Figure 4: M).

If the fan blade is broken, you can measure the length of a single blade x2 (as shown in Figure 2: C)

plus the size of an intermediate disk (as shown in Figure 5: G). If all the blades are broken. You can measure the inner size of the water tank frame or the water tank wind cover (as shown in Figure 8: B). Under normal circumstances, the maximum outer diameter of the fan blade is 5CM smaller than the water tank frame or the water tank wind cover.

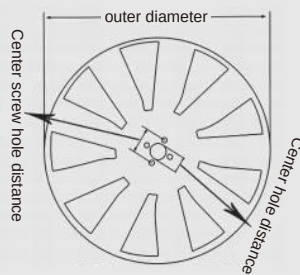

Center inner hole size: that is, the position of the circular hole in the center of the fan blade (it is recommended to use a caliper to measure, which must be accurate to millimeters) as shown in Figure 3: F

Diagonal eye distance size measurement:

Method 1: The center distance between the installation screw hole and the diagonal screw hole (as shown in Figure 6: H),

Method 2: You can also use the measurement method from the innermost side of the screw eye to the outermost side of the diagonal screw eye (as shown in Figure 7: A)

Fan diagram

Foton Auman Z640H-42-64-9

Z: Forward (suction) 640 (outer diameter) - 42 (center hole distance) - 64 (center screw hole distance) - 9 (number of blades)
F: Reverse (exhaust)
H: Ring fan

Special tips:

In order to make this product work better and better protect your car, please install and uninstall correctly, check the fixing bolts and mechanical parts regularly, and pay attention to safety.
